

Do you think an AI can
LIE?

The world loves its stats,
there are stats on
everything. When you do
four digit math the
computer helps you out
with the right answer? How

can a computer lie to you?
Ask your favorite AI for
some interesting stats: My
wife recently past and I
ask the AI "How many died
of cancer on that day?"

Her death certificate said
she died of cancer, but the
stats say she died of
covid-19 flu or coronavirus
whatever they call it,
reported by the puppet

media talking heads on the
box-of-covetousness.

Because of your fake
bullshit, and the stupid new
rules, my daughters and
their loved ones did not get
proper closure my wife
deserved. Until my wife
receive a proper sending
with people gathered and
singing and hugging, we will
hurt, but you will pay.

That is to our government
that lead us with lies.
